DETAILED ACTION

Specification

1. The disclosure is objected to because of the following informalities: Page 9 is missing, a duplicate of page 10 was received instead of Page 9.

Appropriate correction is required.

ART REJECTION:

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. **Claims 1-20,23-25, and 27-42 are rejected under 35 U.S.C. 102(b) as being anticipated by Brown(5,949,327).**

-- In considering **claims 1-17**, the claimed subject matter that is met by Brown includes:

- 1) communicating the data signal on the electric power system is met(see: column 8, lines 1-9);
- 2) modifying the characteristics of the electric power system to reduce the data signal transmitted to an electrical component located on the electric power system is met by installation of the implementation of the conditioning unit(51,52A-52D, column 8, lines 12-35).

Art Unit: 2632

3) the transmitting the data signal to a customer premise is met by the data being transmitted to a premises(48, column 8, lines 1-9).

4) the modifying comprising increasing an impedance imposed by the electrical component and the properties being increased by an inductor are met(see: column 8, lines 49-58);

5) the adding one or more ferrite cores to the power system is met(see: column 10, lines 1 et seq).

-- **Claims 18-20,23-25, and 27-42** recites subject matter that is met as discussed in claims 1-17 above, as well as:

1) the data source and transformer is met by the injection point(50) and transformer(44, column 8, lines 1-3);

2) the blocking device is met by the network conditioning units(51,52A-52D) including inductors.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. **Claims 21-22, and 26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Brown(5,798,913).**

-- In considering **claims 21-22, and 26**, since the system of Brown is designed to facilitate a customer premises, it would have been obvious that various data termination

Art Unit: 2632

devices including but not limited to computing devices, faxes, telephones, televisions, appliances, etc would have received the data signals in the system of Brown, since use of these device are well known in a customer premises since they would have utilized electrical power in order to operate.

Furthermore, it would have been obvious that the data network would have been the Internet, since the Internet utilizes electrical power networks for communication, and as well provide signals to premises. All other claimed subject matter is met as discussed in claims 1-18 above.
